

This system is designed to clean flasks by blowing sterile air and sucking out impurities that are visible to the naked eye

Benefits:

- Made-to-measure installation on all packaging lines upstream of a filling machine
- Several formats, from 10 to 300 ml
- Suited to glass and plastic flasks, pillboxes and pots
- Format change in less than 10 minutes
- Entire standalone operation
- High throughputs of up to 250 flasks/minute
- Can be used to view, quantify and analyse the impurities in the filter
- Complete housing
